

Are you getting the performance that you're paying for?

PerformanceTest allows even novice users to benchmark the performance of their PC. By running through a battery of tests, taking only a few minutes, *PerformanceTest* will measure the speed of each major PC component and give an overall rating.

With a single click, *PerformanceTest* allows you to objectively benchmark a PC using a variety of different speed tests then compare the results to other computers. Twenty-seven individual benchmark tests are available in six comprehensive test suites: *CPU*, *2D graphics*, *3D graphics*, *memory*, *disk*, and *CD/DVD*.

The benchmark results are presented as easy to read bar charts and up to 20 different systems can be graphed at the same time. Results can be printed, saved to disk as a new baseline file, exported as HTML or cut and pasted into another application. Additional baseline results can be downloaded from the PassMark website or be exchanged via e-mail between friends and colleagues. *PerformanceTest's* small footprint allows it to be installed and run from a USB memory stick, enabling users to do their own "in store" benchmarking when purchasing a PC.

In addition to benchmarking, *PerformanceTest* also displays useful system information such as CPU speed, cache memory and the installed video hardware for the computer being tested and all the baseline system results that have been installed. *PerformanceTest*

can be used to measure the effect of configuration changes and upgrades, troubleshoot and diagnose performance problems and D.I.Y benchmarking.

- Find out if your PC is performing at its best.
- **Compare the performance of your machine to similar machines.**
- Measure the effect of configuration changes and upgrades.
- **Avoid paying for overpriced hardware only to get poor performance.**
- Make objective independent measurements on which to base your purchasing decision.
- **Additional advanced benchmarks to graph performance, and measure network bandwidth, multi-tasking processes, and more.**

Since its release, *PerformanceTest* has won numerous awards, including *ZDNet's Editors' Pick*, Compuserve Windows users group's "Best Choice" award and *RocketDownloads'* max award and many others.

System Requirements: Windows 98, ME, 2000, XP and 2003 Server; 80486 or better; 5MB of free Disk Space; 64MB Ram; DirectX 9.0 or higher; (Additional disk space required to run the disk speed test)
